

## Portable laser Monitoring system

This monitoring system adopts the new third generation laser listening technology, which effectively overcome the problem of glass window's black hole and realize to observe the target through windows. It can restore the sound signal in fidelity by continuously detecting the small vibration of low voice and impedance target.

### Product description

#### Description

This monitoring system adopts the new third generation laser listening technology, which effectively overcome the problem of glass window's black hole and realize to observe the target through windows. It can restore the sound signal in fidelity by continuously detecting the small vibration of low voice and impedance target. It is suitable to be used in closed, semi-closed windows environment or open space to effectively listen the person at a long distance.

#### Feature

1. The dual - channel technology is first put forward internationally.
2. Integrated design, portable to carry.
3. Multifunctional operating terminal.
4. Excellent readability to a wide-range various media.
5. Night vision operation.
6. Large data storage capacity.
7. Suitable for long-term field work.
